Account

○ Not connected

0x
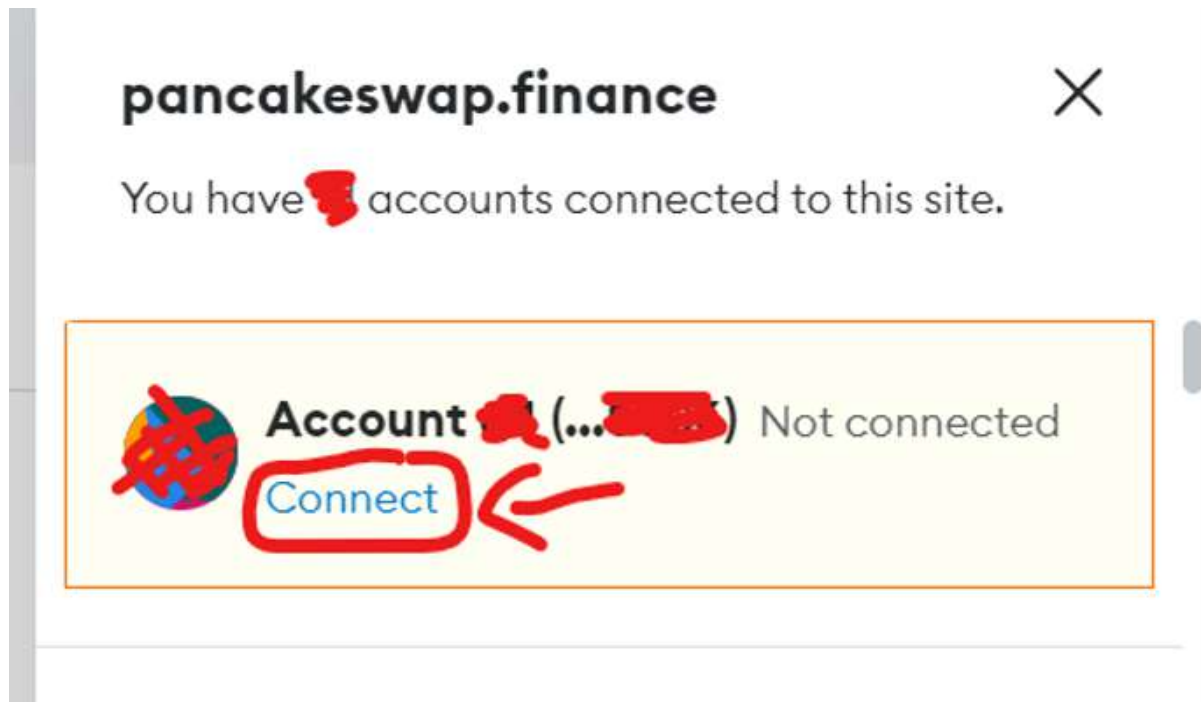

Now we back to Pancakeswap, click Connect Wallet, and select Metamask.

After that, you could see wallet is connected.

*If you are still not connected, you can refresh the webpage, and try the above steps again.

4.Now, click Add Liquidity.
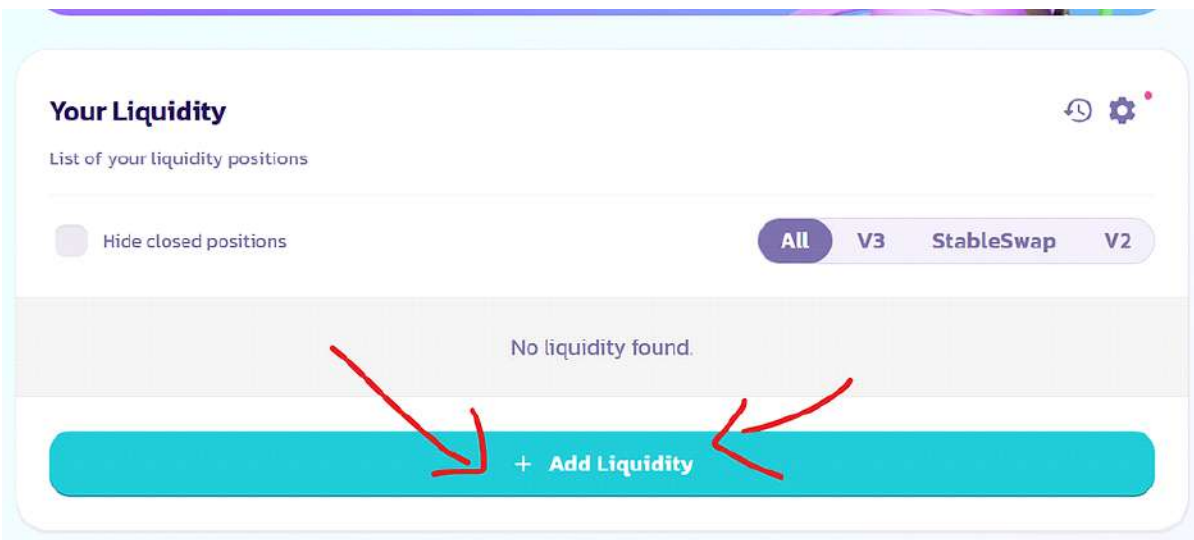

5.Click Add V2 Liquidity (Since V3 is not suitable for new created tokens)
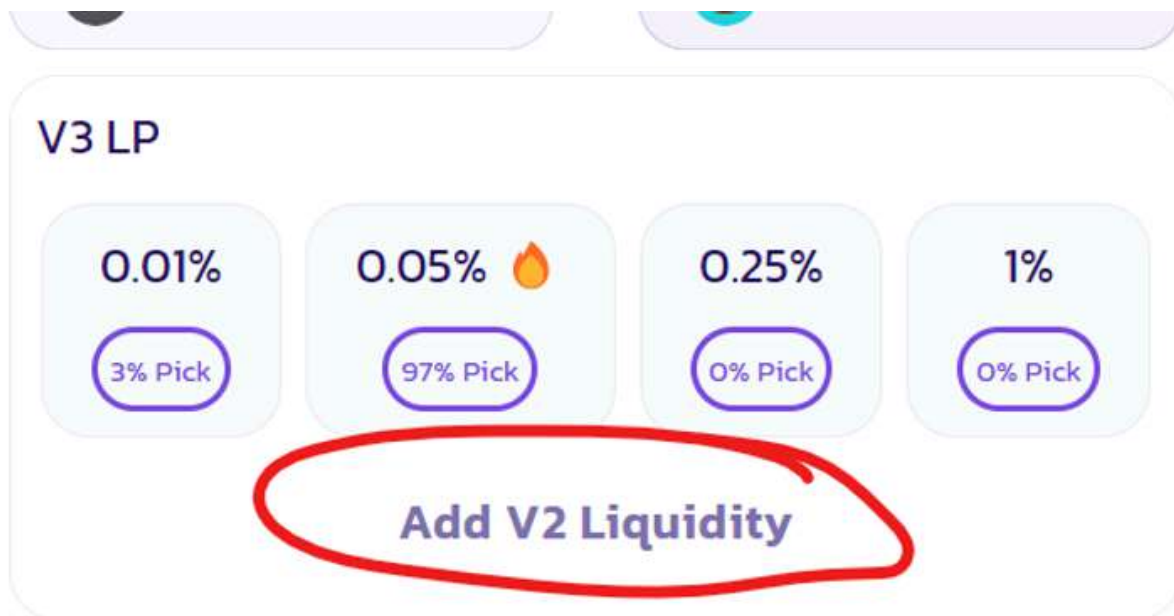

6.Click on the pair to change it.

CHOOSE TOKEN PAIR

BNB + CAKE

7.Paste your token contract address in the space.

Select a Token

Search name or paste address

Common bases ?

Click Import to import your token.

Common bases ?

DVET DevToken

Import

8. After that, Select how much BNBs you want to add as liquidity (Recommended more than 10 BNBs to get more investors to buy).
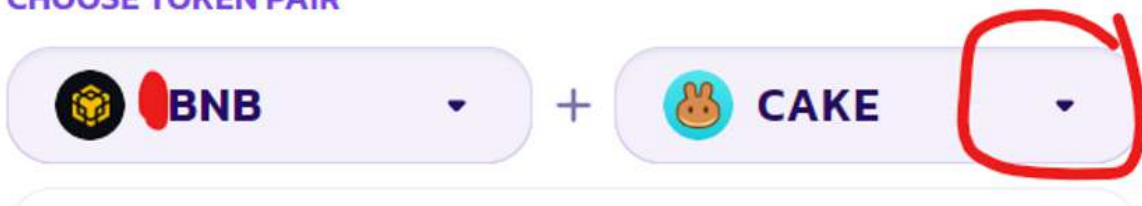

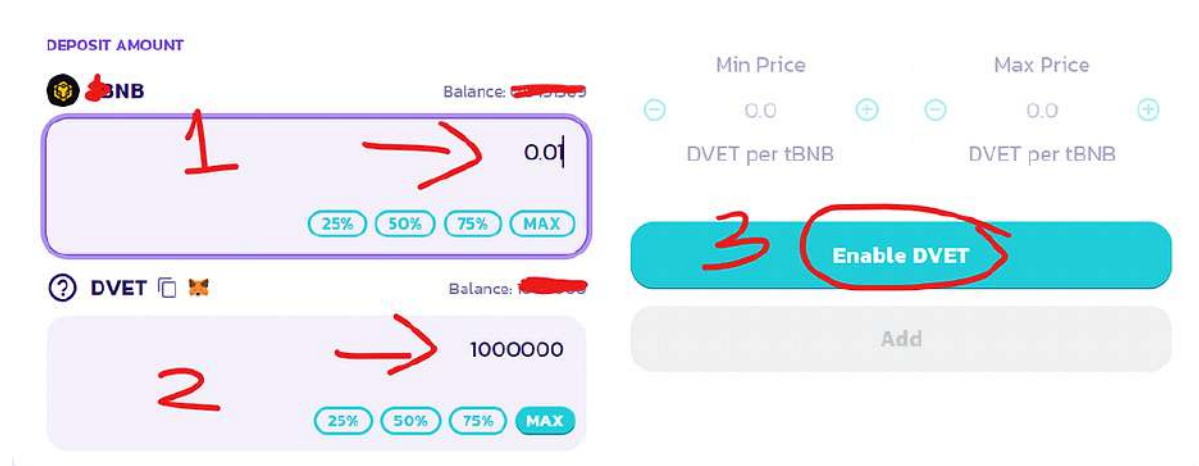

Select how much tokens you want to add.

For example, if u wanna to list 100 of your token with 2 BNB, then your initial token price will be 0.02 BNB per your token.
(2 BNB divided by 100 tokens = 0.02 BNB per token initial price)

After you done setting it, click Enable your token.

Click Use default, click Next, and Approve the transaction

Set a spending cap for your

DVET

Verify third-party details

Custom spending cap   Use default

Enter a number   Max

Only enter a number that you're comfortable with the third party spending now or in the future. You can always increase the spending cap later.
